

Acrylic Black Floor + Acrylic White Floor Mixed

Our floors are laid in an alternating brickwork pattern. Because of this, mixing a black acrylic floor and white acrylic floor **cannot** create a square chequered effect. However, they can be used to create a variety of other interesting layouts, including the layouts shown below.

Acrylic Black & White Chequered Floor

A chequered floor can **only** be created using our Black & White Chequered Full Panels. These are 4ft x 2ft panels each with 1 black and 1 white acrylic square set into them.
